

Fig. 1 is a perspective view of a three-armed, Y-shaped, flexible, elongated, tubular device, 10, having a central, elongated, tubular body, 10, and three, flexible, elongated, tubular arms, 30, 31, and 32, extending from the central body, 10, at one end thereof. The device, 10, is shown in a contracted, coiled, state, with the arms, 30, 31, and 32, folded back towards the central body, 10. The device, 10, is shown in a perspective view, with the central body, 10, and the arms, 30, 31, and 32, being formed of a flexible, elongated, tubular material. The device, 10, is shown in a perspective view, with the central body, 10, and the arms, 30, 31, and 32, being formed of a flexible, elongated, tubular material. The device, 10, is shown in a perspective view, with the central body, 10, and the arms, 30, 31, and 32, being formed of a flexible, elongated, tubular material.
